PBS Kids, Audubon CT and USFWS Refuges help students connect to nature in the New Haven Urban Wildlife Refuge

Through the New Haven Urban Wildlife Refuge Partnership, third graders at Barnard Environmental Magnet School are learning more about wildlife habitat and how PBS cartoons are made. PBS recently developed the animated series “Plum Landing,” with a focus on getting kids in urban areas outdoors to explore nature. The USFWS Urban Wildlife Refuge initiative has similar goals. PBS and the New Haven Urban Wildlife Refuge Partners identified an opportunity to work together at Barnard Environmental Magnet School, one of the first designated Schoolyard Habitats within the Urban Wildlife Refuge Partnership in New Haven.

This winter, Barnard third graders worked with Shaun Roche from Stewart B. McKinney National Wildlife Refuge and Francesca Williams from Audubon Greenwich to bring the PBS Plum Landing activity “Habitat Sweet Habitat“ to life. Alongside Francesca and Shaun, the students braved piles of snow and explored the concept of habitat using their schoolyard as a classroom.
