Utah Natural Heritage Program

Field Data Collection
Who We Are:

- Cooperative of Utah State University and the Utah Department of Natural Resources.
- Keep track of Rare Plants and Animals.
- Database of Sensitive Species.
Field Survey Methods

• Record GPS Location.
• Note presence of target species by counting all Target Plants in 30 x 30 m area.
• Note True Absence of Target Plants by recording N, Neg or 0.
• A blank cell or . indicates the point is not a true absence... it is missing value or null.
• Other endemic species should be written in “notes” column.
Positive and negative points shown above

Talinum thompsonii found
1:100,000 scale
- Talinum thompsonii found 2014
- Talinum thompsonii survey 2014
Salina Hills Survey 2013

- Phacelia utahensis
- Penstemon wardii
- Mentzelia argillosa
- Eriogonum mitophyllum
- Salina Hills Survey
Importance of True Absence

• Records negative data for spatial analysis

• Shows area surveyed

• Helps plan future surveys
IN THE FIELD

• Record points for all target species on form.
• 0 means not present in 30 m square
• Record control points at regular intervals
• Ex: 250 m OR Time interval
• Use 30 m square for control
• Take points at major habitat changes, recording presence absence of target species.
• Short field notes if needed. Such as other endemic species.
Why not track just use track points?

• Field notes are important!

• No record of what was found, only that you were there.

• True absence can be used for distribution models.
# Adaptable Field Form

<table>
<thead>
<tr>
<th>1st GPS coordinates</th>
<th>Date</th>
<th>Surveyor</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cryptantha barnebyi</td>
<td></td>
<td></td>

Where to find the field form

Utah Conservation Data Center

An integral part of the Utah Division of Wildlife Resources, the Utah Conservation Data Center (UCDC) is the central repository for Utah biodiversity information. Although the UCDC focuses primarily on Utah’s rare native species and other high-interest species (game animals and raptors, for example), information on all Utah vertebrate wildlife species, many invertebrate species, and numerous plant species is available.

Utah Conservation Data Center information is a collection of data from many sources. Major data contributors include the Utah Division of Wildlife Resources, the Utah Reclamation Mitigation and Conservation Commission, the United States National Park Service, the United States Forest Service, the United States Fish and Wildlife Service, the United States Bureau of Land Management, Utah State University, the University of Utah, Brigham Young University, the network of state/province Natural Heritage Programs and Conservation Data Centers, The Nature Conservancy, NatureServe, various museums, and numerous individuals.

The UCDC strives to provide accurate information in user-friendly formats. If you have a question or comment about the UCDC, Utah biodiversity data, or this web site, please e-mail us at habitat@utah.gov.

Acknowledgements - The Utah Division of Wildlife Resources would like to thank the Utah Reclamation Mitigation and Conservation Commission (www.mitigationcommission.gov) for providing significant funding to develop our sensitive species database. We would also like to thank the many individuals who have graciously contributed photographs for use on this web site. Website designed by RS/GIS Laboratories, Utah State University (www.gis.usu.edu). Dynamic Web design by DocuMedia Learning Group (www.dmigroup.com).
