Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Miss Stacy Reedy

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Denise Pistana

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Barbara Brockway

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Whitney Schulte

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Russell Landau

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Phoebe Weseley

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Palmeta Baier

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Brian K Sutton

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Gerard Bauer

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Mary More

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Emily Levine

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Stephen Fegley

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Elizabeth Veillette

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Karen Goshaney

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. L Strangstad

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Carol Tao

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Tirso Moreno

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Michelle Unger

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Iliana Lopez

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Thomas Bretl

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Heather E. Drees

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Patricia Lang

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Gregory Brooks

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,

I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Dr. Frank Pfost

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Sally Mathewson

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Robert Hughes

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Patricia Dishman

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. William P. Ostrander, Jr.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Linda Mellen

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. David Neral

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Bonnie Stillwater

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Jacqui Bradshaw

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. William Santagata

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Kristine Metzner

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Clare Weinkam

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Yvette Frank

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Dr. Craig Nazor

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Richard Allen

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Miss Britt Tinkle

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Dr. Don Coddling

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Carlos Arnold

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Elizabeth Robinson

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Ruth Cooper

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Chris Guillory

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Miss Astrid Giese-Zimmer

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Sybille Dubois

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Patricia Pruitt

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Alannah Atley

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. John Mcnicol

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Joanna Martin

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. sandra repiquet

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Paul Haseman

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Miss Yee Yean Lim
