I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Linda Candella

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Elisabeth Björklund

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Larry Pruchniak-Sellers

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Chris Bush

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Ann Mixon

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Jo Ann Van Bergen

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Richard Han

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Kristin VanHorne

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Michele Laporte

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Michael Herzog

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Gary Goldner

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Reed Oliver

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Merrie Thornburg

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Karen Kirchdoerfer

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Bryan Lilienkamp

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Judi Kerr

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. John Moon

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Frances Kelley

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Darlyn Derthick

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Krystian Boreyko

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Patricia Rister

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Makana Smith

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Annalisa Golowacz

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Debra Goodrich

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Jill Shortreed

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Larry Gay

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Karla Hair

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Miss Kyra Schaeffer

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Heather Shanley

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Diane Berliner

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Thomas Ryan

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Micheline Saluga

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Nancy Miller

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Greg Tesorero

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Joanna Brown

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Brian Canny

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Miss Donna Logan

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Jennifer Planeta

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Elise Gibson

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Mary Jobe

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Jennifer Lane

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Judy Sweatland

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Manuel Correa

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Taren Graham

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Laretta Roche

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Kimberly Crane

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Miss Dameta Robinson

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Mary Romanek

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Dr. Nicole Lauren

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Geri Davidson

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Donna Leonardy

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Debbie Biere

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.
