While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Dr. Richard Sibson

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. James V. Carlson

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Melitta Von Abele

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Susan Heer

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Janet Maisen

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Lisa Hoffman

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Benjamin Van Der Veen

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Kristin Carstarphen

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Helen Syen

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
jon jovi

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Lynn Walsh

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Anne Saxe

I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Joan and Paul and PJ Sullivan

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Cynthia Lee

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Peggy Schramm

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Albert Utzig

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Judy Mann

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Sheila Cowden

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Mike Lesley

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Bruce Cook

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Rick Schoenfield

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Christine Josselin

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Karyn Loveless

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Michelle Newell

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Miss Medi Valaji

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles. Given the small number of animals, it makes no sense to remove the Florida panther from the endangered species list.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Sheila Swigert

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles. If this does not qualify as an endangered species, I don't know what would!

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

We have failed the natural order by removing the majority of top predators in order to make our human lives more comfortable. Considering the fact that we are about to witness another huge wave of extinctions, that we have caused, it behooves us to practice the most stringent conservation possible. Everything possible must be done to preserve these predators that keep their environments in check.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered A-status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Carole Giacomazzo

I lived in Florida for fifty years, since folks visited for the exotic plants, reptiles and wildlife. You have an obligation to protect this fantastic cat which is one of the few reminders left when we did not slaughter every living thing in the Chamber of Commerce's path. Protect the panther. You must be Republicans. You're all Republicans, hunters, morally bankrupt, whitey on a crusade. Do your job. Protect the panther. It has a brain. The panther deserves to live.

Thank you for considering my comment.

I support keeping the endangered status of the Florida panther to protect the species from continued threats.

We as a nation have been debating for years what to do to save the Florida panther. There is little question that Americans wish to preserve this iconic symbol of what is diverse and special about America. Humans have, through their quest for land in Florida, contributed significantly to the panther's decline. It is now our responsibility, an ethical responsibility to do everything we can to repair some of the damage we have caused and to give the panther a fighting chance.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

There is no reason - other than stupidity and greed, that these magnificent animals be delisted and their protection ended. We need to fight to preserve them so all future generations can learn to enjoy their unique beauty.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Fran Merker

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

Protect our Panthers!

Panthers help keep a healthy wildlife population and prevent overpopulation of deer.

Please help protect them and their environment from unnecessary development. I live in Florida for the beauty of nature and wildlife, not for more miles of expanded development.

Thank you for considering my comment.

Sincerely,
Ms. Ann Lambeth

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

Dear U.S. Fish and Wildlife Service,

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Barbara Toschi

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

Why must wildlife be continually be threatened by the quest of finding oil and other ways of needless intrusion into their habitat so some of the president's friends be made even richer.

Evidently, money is considered more important than the lives of the few remaining Panthers in this part of the country.

The whole bunch of you should be very ashamed of what you are trying to do. Money, of which you have plenty, will never replace the natural population of all wildlife in this country, something most of U.S. residents cherish.

If you don't change your ways, the Panthers will be gone and their deaths will be on their hands.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment. And please remember--ONCE THEY'RE GONE THEY'RE GONE FOREVER! That's not the legacy you want to leave your children--and theirs.

Sincerely,
Mr. Steven Schlam

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

Removing top predators makes no sense and will only lead to over populations of nuisance animals. I speak from personal experience. Here in western NY we are over run by deer. Without any natural predators, they have become a nuisance leading to vehicular accidents costing lives and medical and collision costs. Add to that the prevalence of deer ticks and lyme disease. Also the cost of crop and horticulture damage.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Restoring these species has been critical to the health of entire ecological systems. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife. The science is clear. Panther populations remain under significant threat and populations have not risen enough to delist them. Please base your decision on science, not political pressure.

Thank you for considering my comment.

Sincerely,
Ms. Karen Jacques

I'm sorry - I don't believe anyone would be so stupid and so immoral as to remove any protections for such a scarce creature. So don't join the Trumpist fools in their push for elimination of all of the Earth's life forms other than stockbrokers and hedge fund managers..

Thank you for considering my comment.

This is hard to believe that delisting the panther is even considered. What should be happening is putting in more underpasses and overpasses to prevent road deaths. Keep the endangered status for Florida panthers. We don't want the only panthers in the South to be an NFL team.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles. These animals deserve protection and signs that warn motorists to watch for them.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Rhonda Weigandt

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

THESE BEAUTIFUL ANIMALS MUST BE PROTECTED TO ENSURE THEIR SURVIVAL AS A SPECIES. PLEASE DO EVERYTHING YOU CAN TO SAVE THEM!

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

It will be a disaster of gigantic proportions if this symbol of the state of Florida goes extinct, especially when we can prevent that from happening by simply continuing to keep the panther on the endangered species list. We must protect what is left of our wild heritage!

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

Now, the conservation status of the Florida panther is in question. I strongly support keeping the endangered status of the Florida panther.

The fate and survival of the Florida panther depends on the continued protections it receives under the Endangered Species Act and the conservation of public lands they call home, such as Big Cypress National Preserve and Everglades National Park in Florida. Significant threats to panthers already exist in and around their intact national park habitats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Currently, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Again, existing threats to the Florida panther include seismic testing for natural gas, off-road vehicle use, human-wildlife conflict, development and human encroachment. Actions that degrade the wilderness of the greater Everglades ecosystem, while impacting the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

As a native Floridian, and property owner, I am deeply concerned about the future of my beautiful home state and its fragile eco-system. It is incumbent upon us to ensure that future generations will be able to inherit the irreplaceable wonder and beauty of this one-of-a-kind landscape and its wild ones.

The Florida panther is deserving of the protection that endangered species designation provides and it must continue to be listed as such. To remove such protection is to further degrade and endanger the future of Florida's incredible diversity and beauty. Please keep the Florida Panther's endangered status intact.

Thank you for considering my comment.

Sincerely,
Mrs. Gay Arnold

Given the encroachment of development on the panthers' habitat unabated in any meaningful way, the very least we can do is to keep their "ENDANGERED" status to mitigate their destruction. Get off the interstate in South Florida and drive some of the once little used one lane roads. They are now eight lanes of speeding vehicles. The Florida panther is MORE ENDANGERED than ever.

Thank you for considering my comment.

Sincerely,

The UK hunted their deer until there were none left except the protected ones on the Queen's estates.

Are you going to allow this to happen to the Florida Panther?
You should be banning ALL hunting, trapping and indiscriminate poisoning of wildlife in order to protect this endangered panther.

Kill the over-populated and dangerous alligators and non-native pythons instead.

Sincerely,
Dr. Carl Prince

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

I'm a native Floridian. I believe it is crucial that the state's wildlife and natural beauty be protected.
Thank you for considering my comment.

I support keeping the endangered status of the Florida panther to protect the species from continued threats.

Right now, so many of our wildlife, here and abroad are in danger of extinctions. Encroachment from human population, death by cars and many many other means. We MUST do everything possible to save our national heritages. There must be sustainable populations and reduce the risk of genetic pool limitations. Florida Panthers need us to save them. Who will save us, will one day be our question.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. We need to "wake up" to the need of biodiversity. We need adults to "get it" and do the right thing for future generations and for the health and sustainability of our planet.....so goes the environment, plants and animals.....so goes the human race!!!! Don't think these things are unconnected!

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

Please use your position of influence to do everything you can to protect Panthers. Apex predators play a crucial role in maintaining healthy ecosystems.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Katrina Child

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

The U.S. Fish and Wildlife Service has said that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. With the rise in panther deaths, (about 30% of the population dying each year many by cars) now is not the time to ignore the experts by delisting.

In addition to cars there are threats to panthers in their current "best" habitat: Big Cypress National Preserve and Everglades National Park. seismic testing for natural gas, off-road vehicle use and other human-wildlife conflict all kill panthers.

I strongly support keeping the endangered status of the Florida panther. Protecting the Florida panther from threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Terry Carlson

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Moreover, apex predators indigenous to any ecosystem play a role in controlling other populations, some of which can decimate the plants, which are the photosynthetic base (plant life) for any given ecosystem. So besides your statements of populations being wrong, every species deserves the ethical right to go on living.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

PROTECTING THE PANTHERS WILL MEAN BETTER QUALITY OF LIFE FOR PEOPLE. PEOPLE BENEFIT FROM CLEAN, OPEN SPACES. LIKE THE PANTHERS, PEOPLE ARE KILLED AND MAIMED BY MOTOR VEHICLES AT AN ALARMING RATE. MOTOR VEHICLES ALSO PRODUCE A LOT OF POLLUTION, NO DOUBT A CONTRIBUTING FACTOR IN WHAT SEEMS TO BE EPIDEMIC CANCER RATES TODAY. SAVE THE PANTHERS AND SAVE PEOPLE! God put these magnificent animals on earth for a reason. We should behave responsibly in protecting them.

Thank you for considering my comment.

Sincerely,
Ms. Cristina Smith

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

Way to early to delist the panthers in Florida. The progress made to increase their numbers took a long time and remains tenuous. Let's not risk undermining the small panther success by delisting prematurely.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I support keeping the endangered status of the Florida panther to protect the species from continued threats.

It is a little premature to try and delist the panther. Especially with the amount of development and destruction of their habitat. Every time we visit southwest Florida it seems every place they have panther crossing signs is currently under new development. It is sickening.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

My daughter is a doctor. She is a wildlife veterinarian and spends long hours and time outside a typical workweek to ensure that iconic animals stay healthy. In part this is because she wants her two year old nephew Noah, my grandson, to know and appreciate them - first hand, not just in books or historic internet pictures.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Jackie Kaye

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant problems remain in creating a sustainable populations. Habitat fragmentation, seismic testing for natural gas, off-road vehicle use and human-wildlife conflict are all problems, particularly development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Carol Siewert

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife. It worked for the Bald Eagle and the Peregrin falcon, it can work for the Florida Panther if we let it.

Thank you for considering my comment.

Sincerely,
Mr. Glenn Davis

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

Florida panthers are still so few in number, and the challenges to their existence in Florida are not diminishing, so it's essential that the panthers stay on the endangered list.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

I STRONGLY support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

We need a strong and invigorated ESA and we need to allow it to do its originally assigned job! Two hundred animals does NOT make a species "recovered" so we must leave the FL panthers with their endangered status.

Thank you for considering my comment.

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Please be aware that significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I am writing as a strong advocate for protection of endangered animals because I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comments and letter.
Jean Marie Naples, MD-Ph.D.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

This is a serious issue. Without our legacy wildlife, we are just a bunch of selfish humans running around the planet destroying species and other humans. Seriously. Let's protect the Florida panthers.

We have mountain lions in far West Texas in the Chisos Mountains of Big Bend National Park. And we have had a return of *Ursus americanus*, the American Black bear, which had been eradicated from Texas by "you know who"--us, of course, but came back from its last refuge in Mexico several decades ago, thank God. If "you know other horrid who's" insufferable wall is built, there will be a species catastrophe for countless migrating and foraging animals.

Please. Don't let Florida follow this dangerous path. We need our wild ones with us. You don't have a Mexico for your panthers to retreat to and come back from. It's up to you. Because you know what the many unthinking stupid humans will do the minute you slacken protections. Right!

Don't delist the Florida panther!

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

It is critical for your agency to stand up to the powers of greed, blindness and selfishness that exist in the White House at the current time.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Sherry Pennell

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

Greetings!

You have my best wishes in your challenging work to protect our wild life. I write today to support the endangered species status of the Florida panther. Keeping our wildlife safe is important to me as a taxpayer and citizen of our nation.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Pamela Abbey

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

There are so few Florida panthers left, that there is only one group of them above 200. That's way too few.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

So, please keep the endangered status of the Florida panther. The Endangered Species Act has played a massive role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for taking seriously my comment.

I support keeping the endangered status of the Florida panther to protect the species from continued threats.

As a Florida registered Environmental Professional, I urge you to keep all protections in place to help the Florida panther survive. While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Sandra Mann

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife. We humans are the cause of the panther's demise. Let's continue our efforts to restore the panther population.

Thank you for considering my comment.

Sincerely,
Ms. Susan Harris

Thank you for considering my comment. Please keep in mind that all life on our Earth is dependent upon all life. When even one species goes extinct humans go up one more ladder rung in the possibility of extinction. So please, do the right thing to protect the Florida panther by keeping that endangered species on the Endangered Species Act - that is what it is for! The Florida panther species has the right to life just as we human beings do! When our turn comes up and we reach the top of the ladder who will speak up for us? There won't be any life left in that we humans have caused all other life forms to go extinct! All Earth life is precious, please protect the Florida panther along with any other wildlife, which might come under your microscope!

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

I am sixty-one years old.

I am a native of Florida. I grew up in the Green Swamp area. I was very poor, my family was dysfunctional, and racism was terrifying. (I am white.)

Nonetheless, there was much beauty, and I feel sorry for those that did not experience the beauty I saw around me every day.

I no longer live there.

The state I grew up in is no longer there.

There is land there, but it is unrecognizable. Even where it is not developed, logging and sand mining has destroyed what was there.

I found a young panther when I was a child. It was near my home. I followed it, thinking it was the most beautiful house cat I had ever seen. I thought if I could pet it, I could make it tame. It teased me by staying just out of reach.

I think of it often. I realize more and more how magical that event was. I know that sort of thing is unlikely to ever happen again; to anyone.

Thank you for considering my comment.

I concur with this statement in its entirety. Florida is a swampland with houses sinking due to building on swampland! No land is off limits and the land and water where the "Creature from the Black Lagoon" was filmed in the '50's is now not clear and a cesspool! While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

I lived in Florida for many years and in fact worked as a USFWS ranger there. I know that protected panther habitat has not expanded, nor has there been a drop in vehicular traffic, nor has exploration for natural gas diminished. Life, in fact, has gotten harder for the panther's survival.

This is not the time for USFWS to revise its earlier decision that for the Florida panther to be delisted as an endangered species there must be at least two populations of over 200 animals. If these numbers--as low as they are--have not been reached, why is there a discussion about delisting the panther now?

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

There are so few left. Show some mercy!! Enough of corporate greed swallowing species whole.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Pamela Askew

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

So the idea is if the panthers make a small step forward (because of their protected status), it's the signal to de-list and return them to the risks that made them endangered in the first place?

Sounds like just the sort of plan an industry-compromised bureaucracy would go for. It's a wonder there are any panthers left at all. What a wishy-washy effort.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

It's about time that the animals take precedence over all these other desires. More and more of their land is being taken away. We don't need seismic testing as we don't need more oil or more gas. We can get that at other sites. We need to give these beautiful animals a chance to survive. There are not enough of them in the wild. They don't even meet your quota so stop!!

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

We must continue to protect habitat to support this species- protect the recovery. While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Kathleen Querner

I support keeping the endangered status of the Florida panther to protect the species from continued threats.

For years and years the number of Florida panthers sank. Cars will forever be a large cause, but there is not a large enough population still for the species to survive even a minor epidemic of anything.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Panthers certainly need to stay ON the Endangered Species list with such low numbers, the continued threats from development, pollution, car deaths, fragmented habitat, climate change, etc. panthers MUST stay ON the list!

The majority of Americans want our wildlife and wild places left ALONE!
We do NOT want trapping, hunting, etc. on public land!

The majority of Americans want agencies to protect, conserve and allow nature and animals the chance to LIVE!!!

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

You need to keep your word to the American people. The U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There also has been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

That, against all odds, a slight uptick in the number of panthers has been noted does not change the essential facts of this case: the Florida panther is in serious danger of disappearing forever unless our policies continue to protect to the minimum standards needed for even a chance at survival. You agreed that minimum standard was two populations, not one.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

I continue to be very distressed by the policies of this Administration aimed at rolling back vital protections achieved through many decades of hard work, going back to the Administration President Nixon and even beyond to earlier in the 20th century. I will continue to exercise my rights as an American citizen to oppose policies that are injurious to the environment and its wildlife, and I will oppose at the ballot box

all those would pursue such policies.

Thank you for considering my comments. Now, please do the right thing and do NOT delist the Florida panther.

Sincerely,
Ms. Carol Doerflein

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

Please keep protecting the Florida panther. Extinction is unthinkable.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

Once the Black bear was being considered for delisting, I called to protest this delisting because I knew that they would then be hunted and we will loose this species, and the woman I talked to at Fish and Wildlife assured me they would not be hunted. A few years later, what I worried would happen, did happen and the once listed threatened species, the Florida Black bear has been hunted. They have shot and killed pregnant and lactating females, and cubs. I had more than once, seen a Black Bear on my drives through Ocala National Forest. I no longer see Black Bears on my drives through the Ocala National Forest, where they once roamed protected. The same will happen to the Critically endangered Florida Panther. Fish and Wildlife needs to reinstate threatened designation to Florida Black Bears and Keep the Endangered designation for the Florida Panther or we will loose them both.

The people who are paid to protect our wildlife are not doing their jobs. We need to remove the top people in charge at Florida Fish and Wildlife, who are not scientists, who are not listening to the Biologists and Ecologists and other scientists who say the science shows, we need to keep the protections on our threatened and endangered wildlife. These top people were placed there to do the bidding of the corporations who want to drill, mine, and destroy our protected areas. They want to remove the protected status of our protected wildlife, so they can further their agenda. They do not care about doing the job they were hired to do, which is protecting wildlife. They are doing the bidding of the corporations who placed them there, through the Governors office. We must continue protections for Panthers and reinstate protections for Florida Black Bears. I agree with the rest of this message.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Once a species is extinct, no amount of regret can bring it back. Development has options; the panthers do not.

Thank you for considering my comment.

Sincerely,
Ms. Elizabeth Heath

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been MINISCULE increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least three populations with individuals over 200 but there are only 2 populations and that includes fewer than 200 individuals. There has also been a precipitous rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles! It is time to afford them much greater protections, such as overpasses, much stricter enforcement, and permanently keeping them on the endangered species list, and increase the size of their habitat and curtail habitat destruction, euphemistically known as "real estate development". WE MUST NOT ever delist them, because in doing so the corrupt interests will wipe all of them out mercilessly!

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human infestation and encroachment, again, euphemistically known as "real estate development", continue to negatively impact the Florida panther.

WE strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering our comments.

Sincerely,
Mr. Vince Lopez

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Dr. Craig Gingrich-Philbrook

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

We are fervant supporters of our animal brethren and our National Parks. We are happy to see animals return to their native habitats. Soon we will be residents of Deland Enjoying Florida and its beauty. While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

The ESA is a critical piece of legislation that has saved many species from extinction. Please make sure it continues in this capacity to protect creatures that otherwise could be lost forever.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Carla Boudreau

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

We all need to ensure that our biological chain is uninterrupted for ours and the next generations...that is for our children's children children:

think about the generations to come

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. I may live in the UK but I have visited the US many times. The last time was to Florida & spent a few days in & around the Everglades.

We weren't lucky enough to see a panther but they need to be protected. Our world is struggling to cope with the human race but we wouldn't be here if there wasn't wildlife. We need to live together.

Thank you for considering my comment.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

The Endangered Species Act has been a godsend to wildlife such as the California condor, the Brown pelican and others that have struggled against many odds to survive and then thrive. We humans are directly responsible for the plight of the Florida panther and we MUST be the ones to help it survive. It is critical that the Florida panther be kept on the Endangered Species list.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Maureen Oleyar

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Another Florida panther died today-a young female, hit by a car-she could have bred and had babies-we really need to protect the remaining few that we have left PLEASE keep them on the endangered list and protect them from poaching, car strikes, and other dangers.

Thank you for considering my comment.

Sincerely,
Ms. Paula Powers

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

I lived in Florida for 5 years. I visited the parks. I heard the stories of the panthers killed on the road. I saw the shrinking habitat for them as people built houses and shopping centers further into the swamp. The panthers are in danger and if we don't protect them now, it will be too late.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

It is imperative to keep the "Endangered " Status to protect the Florida panther. Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Reducing the "Endangered " Status will only degrade Big Cypress National Preserve and make those areas more vulnerable to exploitation.

The 200 Florida panthers (including all other panther species) are the only documented population left east of the Mississippi. We need to protect that population and the habit in which this population of panthers thrive.

Thank you for considering my comment.

Sincerely,

I personally have never seen a Florida Panther, but I care about any species which has suffered habitat loss and is endangered. I think the endangered status should be retained; I like to think that perhaps my one-year old grandson might one day get to see one, or at least that they would still exist in a healthy population to make that possible.

Thank you for considering my comment.

I concur with this statement in its entirety.

Florida is the armpit of the United States and the land has been "repurposed" without regard to people or wildlife - hence the "sinkhole alley" where houses have been sucked underground. One with a person inside sleeping in his bed. The land has been used and abused for human use with absolutely no regard to the consequences for animals, the environment or humans. Now look at the mess you've made. The lagoon used in the movie "the creature from the black lagoon" was a crystal clear body of water turned into a cesspool. There is a clear lack of respect for the Florida ecosystem. Learn from centuries of mistakes. Undo the damage and protect the Florida panthers.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

I am writing to support maintaining endangered status for the Florida panther. While panther numbers have increased recently, the U.S. Fish and Wildlife Service has stated that there must be at least two populations of over 200 animals for the Florida panther to be delisted. Currently there is just one population that includes fewer than 200 individuals. There has also been an increase in the number of panther deaths, with about 30% of the population dying each year, mostly from getting struck by vehicles.

There are ongoing threats to panthers in and adjacent to their most intact habitat in Big Cypress National Preserve and Everglades National Park. These include seismic testing for natural gas, off-road vehicle use and conflict with people. Development and human encroachment also adversely impact the Florida panther.

For these reasons I urge you to keep the endangered status of the Florida panther. Thank you for considering my comments.

Sincerely,
Dr. David Harrison

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

Please. The panthers' numbers have increased slightly so we know the situation is not hopeless, but the threats to their survival are also increasing in number and kind.
Keep their endangered status in place and let us try to rebuild this ecosystem.

Sincerely,
Ms. Roz Schneider

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment and hopefully acting in defense of the Florida panther.

Sincerely,
Mrs. Nancy Ryan

I support keeping the endangered status of the Florida panther to protect the species from continued threats.

Since Florida will be one of the first places to vanish with rising ocean levels, do you really think it is smart to weaken protections for panthers so that more fracking and oil drilling can take place in the state? These activities only speed up climate change.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. I think decent caring people are foolish to think that Ryan Zinke cares about wildlife. He's too busy taking photos of himself on a horse like he's John Wayne. Trump is a good guy, but I think Zinke was a mistake. He's going to sacrifice the national parks, the animals and anything else he can lay his hands. Breaks my heart.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

Panthers are a top predator that is crucial to the survival of ecosystems such as Big Cypress National Preserve and Everglades National Park. The U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Although there have been recent increases in panther numbers, there is only one population of panthers and that has fewer than 200 individuals. Furthermore, there has been an alarming rise in the number of panther deaths, with about 30% of the population dying each year--mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitats in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks and thereby restoring the health of the ecosystems. I urge you to protect the Florida panther from increasing threats, which is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Pietro Poggi

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

I live in Florida and frequently visit our national parks. I have encountered a wide variety of Florida wildlife over all of these visits. I have never seen a panther or signs of a panther. The human population in Florida is only increasing. As it does, the habitat for wildlife is being encroached upon daily. Florida panthers still need protection. They are an important part of Florida's diverse ecosystem. Please, do not fail them.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Thank you for considering my comment.

Sincerely,
Ms. Ashley Paulus

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

As a Kansan I strongly support the continued protection of the Florida Panther. It's numbers are low to maintain the survival of this species. While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. BAileen Mccune

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

We live in Bonita Bay; and enjoy the balance between Florida native residents (the eagle, bear, bobcat and panther and many others) and ourselves. Florida has a history of a pristine beaches, amazing grasslands, and abundant wildlife. Protecting the panther and their habitat, is part of protecting Florida.

Hurricane Harvey has given us yet another example of the destruction and loss of life that can result when we built in wetlands. Saving the panther (which means continuing to protect the panther) and maintaining adequate habitat is important to their survival and ours.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

Every animal has a purpose in nature. Some animals are more cute and cuddly and therefore more easily loved.

But cute or not, every animal has a purpose.

Someone must step in and do the right thing. It is therefore up to the USFWS to stand strong and protect the FLORIDA PANTHER and the ESA!

The ESA was created for a very good reason. But since its creation in the 70's, there have been constant threats to it. There has been a battle against the listing of just about any animal being considered.

No animal seems to be critical enough to list, or remain listed, according to some of our members of Congress and administration. The FLORIDA PANTHER needs the full protection of the ESA!!!!

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

Even though there has been some increase in Florida panther numbers, it is not sufficient to delist them. U.S Fish and Wildlife Service states that at least two panther populations must have over 200 animals in order to be delisted. Currently there is one population that has less than 200 individuals. Another factor that must be taken into serious consideration is the increase in panther deaths due to human activity. These animals should not be placed in a more vulnerable status because of human interaction.

Other threats to these beautiful animals exist in their most intact habitat, one that should be fully protected no questions asked, in Big Cypress National Preserve and the Everglades National Park. These threats come from seismic testing for natural gas (something I strongly oppose) and off-road vehicle use (another thing I oppose). These activities take away from the characteristic of wilderness endemic to these geological features. Human encroachment into the Everglades and panther habitat is offensive and should not be allowed.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act is a tool for good and for preservation of the vulnerable. It plays an essential role in restoring iconic species in our national parks. The Florida panther is a perfect example of an iconic, breathtaking in its beauty, species that must be protected by the Endangered Species Act.

Thank you.

Sincerely,

I visit Florida every year. The wildlife that calls Florida home is important to me. I have seen a lot of habitat destruction leading to a decline in important species that make Florida special to visitors and residents. Panthers are important. There is no "good" reason for USFandW to delist them. They should remain on the endangered species list.

Please stay on the right side of history.

Thank you.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

They are ON THE BRINK and we can NOT allow their disappearance.

Thank you for considering my comment.

Sincerely,
Mr. Peter Repak

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks, like many bird species that rely on the panther's habitat. As a bird-watcher, I do not see the value in visiting Florida or national parks anymore if the wilderness is not preserved appropriately with a diverse spread of bird species. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Miss Claire Wayner

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I Strongly Support Keeping the Endangered Status of the Florida Panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks.

Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Carla Cicchi

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

As a frequent visitor to Big Cypress National Preserve, I want to make sure that there are adequate protections for the panther - and I'd love to see them roaming the northern part of the state, where I also frequent, such as Ocala National Forest.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.
