While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Elizabeth Eisenbeis

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. William Koopman

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Joseph Fysz

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Lisa Pisano

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Dr. Karen Duckwall

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Maria Lasorsa

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Marlynn Canty

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Kirk Phillips

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Joan Kolessar

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Patricia von Alten

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Ann Marie Weis

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Janet Campbell

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Shirley Gunn

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Tina Knight

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Sherri Wright

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Jeri Ichikawa

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. K Page

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Matthew Adler

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. kathleen van every

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Brant Kotch

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Thomasin Kellermann

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Leslie Johnson

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Vicki Belanger

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Harold Cantrell

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Nicholas Lenchner

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Christina Ochsendorf

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Kathryn Carroll

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Olga Rose-Jones

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Krista Gobby

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Dr. Robert Rosenberg

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Joshua Jones

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Ann Kelly

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Dallas Windham

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Elaine Brazin

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Rich Strassberg

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Dr. Lanny Rudner

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Patricia Keefe

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Lawrence Page

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Louis Chorba

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Richard Medina

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Dora Rushing

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Oda John

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Richard Nelson

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Cami Leonard

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Art Vankampen

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Jean Eunson

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Peggy Furminger-Haist

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Sandra Klueget

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Amy Phelps

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Maureen Gibson

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Laraine Snooks

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Darcy Voogd

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Abby Wanamaker

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Jenni German

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Stu Farnsworth
