Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Aldora Perez

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Richard Beaulieu

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Marsha Gaines

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Katalin Weisz

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Ardelle Tuxen

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Carol Schaffer

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Bria Servoss

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Marjorie Angelo

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Richard Horwege

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Barbara Sundberg

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Mario Madero

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. George Motisher

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Miss Lora Leland

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Arlene Chavez

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Dr. Elisabeth Bechmann

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Lynn Ebeling

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Patricia Ackor

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Miss Marie Wiorski

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Dr. Heather Elizondo Vega

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Miles Mclennan

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Linda Johnston

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Polly Smith

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Rodney Stark

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Dr. James Rush

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Katherine Brown

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Michael Hill

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Tom Yahnke Sr

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Jennifer Hill

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Dr. Pamela Finnegan

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Casey Smith

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Gayle Countryman-Mills

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Michael & Vinnie D'Annunzio

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Joan Harris

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Merry Harsh

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Ursula Campos

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Sonya Guidry

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Wayne Leanne

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Claire Simonich

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Susan Pernot

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Beverly Witchner

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Bill Shumway

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Judith Kirchhoff

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Debra Gley

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Manny Garcia

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Lynn Wilbur

Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. S Serne

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,

Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mr. Roger Kulp

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Mrs. Hayli Walker

Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Donna Leslie-Dennis

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Victoria Villarnovo

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Laura North

There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Carol Murphy

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.

Sincerely,
Ms. Judy Shively

Subject: Keep "Endangered" Status to Protect Florida Panther

Dear David Shindle,

The Florida panther is one of our nation's most iconic animals, yet it is also one of the most endangered. Once thriving throughout the southeastern United States, including on lands that are now part of national park sites like Big Cypress and the Everglades, habitat loss and human activities have decimated the animal's population. I support keeping the endangered status of the Florida panther to protect the species from continued threats.

While there have been recent increases in panther numbers, the U.S. Fish and Wildlife Service has stated that for the Florida panther to be delisted, there must be at least two populations of over 200 animals. Right now, there is one population that includes fewer than 200 individuals. There has also been a rise in the number of panther deaths, with about 30% of the population dying each year, mostly from collisions with vehicles.

Significant threats to panthers already exist in and around their most intact habitat in Big Cypress National Preserve and Everglades National Park, including seismic testing for natural gas, off-road vehicle use and human-wildlife conflict. Actions that degrade the wilderness characteristic of the greater Everglades ecosystem, including development and human encroachment, continue to impact the Florida panther.

I strongly support keeping the endangered status of the Florida panther. The Endangered Species Act has long played a central role in restoring iconic species in our national parks. Protecting the Florida panther from increasing threats is critical to the health of national parks in South Florida and efforts to preserve America's diverse and unique wildlife.

Thank you for considering my comment.
